

Hi Rich,

There you go!

We implemented the Max POD trim system in our print and mail facility. Our goal was to reduce the dust, improve the quality of the air and also maximize our foot print around the equipment. The installation of the system went well and the system performed almost immediately after the install. It requires low maintenance on a daily basis and help productivity. It's a simple system and can be moved if needed. This was a very good initiative in our LEAN manufacturing production environment.

Thanks
